

Tivoli Monitoring for Transaction Performance capabilities

Tivoli Monitoring for Transaction Performance has several capabilities that make it flexible, efficient and easy to use:

- **IBM WebSphere® and BEA WebLogic performance analysis**—Facilitates drill down through the end user's transaction to understand the delay in each component and verify that the right problems are handled promptly.
- **Visualize transaction flows across systems** – See transactions and responses times at the end user client, Web server, Web application server, database and other back end systems to quickly isolate bottlenecks.
- **Dynamic discovery and automatic base lining** – Proactive understanding of where transactions flow and sets performance thresholds for each component to speed time to value and accelerate deployment.
- **Understand the end users performance** – Comprehensive set of tools to provide end user based response time views.
- **Enhanced real-time reporting**—Provides a browser-based view of the performance status of e-business systems, with a drill-down capability to isolate problem transactions.

Tivoli Monitoring for Transaction Performance is a comprehensive, integrated IBM solution that you can use to manage and maximize the performance of a Web and enterprise IT infrastructure. With it, you can pinpoint, isolate and automate the correction of performance problems before they significantly impact customers, employees and other end users.

Tivoli Monitoring for Transaction Performance enables you to:

- *Reorient the systems management function around a transactional view to closely align IT objectives with those of the business.*
- *Employ both active and passive monitoring to understand the end-user experience from a transactional perspective, instead of just a resource perspective.*
- *Locate sources of performance problems quickly and speed the time between the identification of a real or potential performance problem and corrective action, by leveraging the software's strengths in analyzing total and detailed transaction flows.*

With Tivoli Monitoring for Transaction Performance, your enterprise can build a complete transaction-based performance and availability solution. Just as importantly, you can leverage this solution along with other key Tivoli products to maximize customer satisfaction, minimize costs and satisfy the challenging requirements of today's On Demand Business environment.
