

Patch Manager

Save Time, Reduce Costs and Secure Systems

The Ecora Solution

Easy to deploy and easy to use, Ecora Patch Manager automates the patch management lifecycle to save you time, reduce your costs, and provide a more secure environment.

Patch Manager provides users with a simultaneous, single-console, agentless and agent-based deployment option to quickly scan, analyze, and patch servers, desktops and laptops throughout unique computing

environments. With consistent, accurate patch analysis and reporting, it's easy to keep your systems patched and eliminate new vulnerabilities before they can be exploited.

Generate over 25 web-based reports with Patch Manager's Reporting Center to constantly validate you are in compliance with your security policies and regulatory requirements.

KEY FEATURES

- **Optional Agent.** Maximize the speed and effectiveness of automated patch management by selectively deploying agents to ensure mobile and other less accessible users are protected, while also giving administrators the flexibility to reduce the information load on the network.
- **Reporting Center.** Review comprehensive, web-based, ready-made reports that provide details from a managerial to technical level.
- **Extensibility.** Quickly add third party vendor patches and manage their deployment without the need for complicated SDKs and scripts.
- **Repository Manager.** Automatically schedule patch downloads to repositories in your enterprise so patches are always readily available for immediate deployment.
- **Partial Analysis.** An alternative to our comprehensive Sure-Scan technology, check for missing and installed patches quicker based on analysis of file versions only.
- **Sure-Scan.™** Thoroughly and accurately analyze missing and installed patches by dynamically updating its database with current patch information, based on file versions and Checksums.
- **3-D Patch Views.™** Quickly see what critical patches are missing and/or installed by host, application, or patch in sortable displays.
- **Alerting.** Alert on multiple events, including new patch databases, new patches for a specific OS or application, patches missing, or failed patch installation.
- **Test Center.** Designate a reference system to conduct patch testing against before deployment.
- **Patch Rollback.** Automate the removal of a selected patch if conflicts develop due to a patch install.
- **Wake on LAN.** Optionally boots powered-off machines for patch installation performed during off hours to assure successful patching of all systems. Eliminate the additional labor of having to physically reboot each computer.
- **Import/Export Manager.** Users can import and export existing corporate patch policies into Patch Manager. This feature helps users enforce their corporate patch policies across their enterprises.

Installed Patches by Severity

Severity	Total Available (installed inclusive)	Installed	Percentage
High	230	164	71.30%
Medium	107	115	107.48%
Low	49	33	67.35%
Minimal	93	45	48.39%

Policy Compliance Report

Installed Patches by Severity
Verify that the highest severity patches for your systems have been remediated.

Patch Policy Compliance
Verify that all systems are compliant to your internal patch policy, and remediate those that are non-compliant.

Ecora Patch Manager Patch Management Lifecycle

Discover

- Auto-discovers servers and workstations
- Logically groups systems for ease of management

Analyze

- Accurate patch analysis with either Sure-Scan™ or Partial Analysis
- 3-D Patch Views™
- Alert notification of new patches
- Policy-based analysis

Research and Test

- Ecora engineering notes from extensive lab testing
- 3rd-party severity ratings from CIAC
- Links to Microsoft and other vendors' patch information
- Ecora Patch Test Center

Remediate

- Scheduled patch deployment
- Policy-based patch remediation
- End-user Wake on LAN option

Safety Net

- Automated patch roll-back on one or more machines

Report

- Browser-based Reporting Center
- Monitor patch progress and compliance
- Overview and detail-level reports

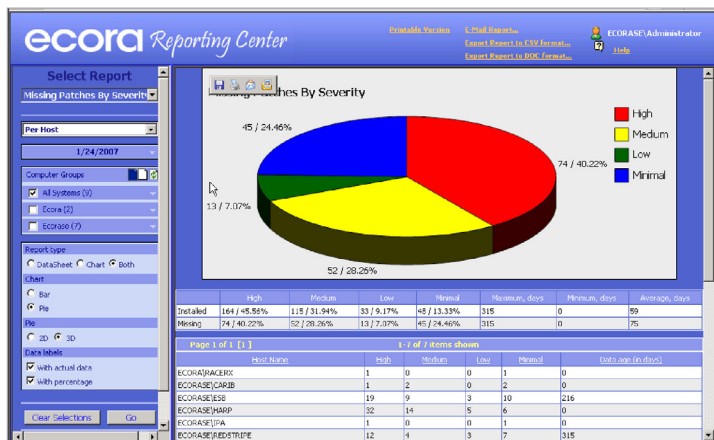

“Patch Manager really delivered an immediate return on our investment. It saved us so much time that we now spend on other important projects.”

—Fritz Ferrante

Manager of Information Systems
Providence Kodiak Island Medical Center
